An Overview

FAR
BEYOND

The Occupational Therapy program is a graduate, three-year program, accredited by the Accreditation Council for Occupational Therapy Education (ACOTE)* of the American Occupational Therapy Association (AOTA). Applicants must have a Bachelor's Degree in addition to the prerequisite coursework and must complete the Stony Brook supplemental application. Upon successful completion of the program, graduates receive a Masters of Science in Occupational Therapy Degree.

Occupational Therapy graduates will be able to sit for the national certification examination for occupational therapists administered by the National Board for Certification in Occupational Therapy (NBCOT).

After successful completion of this exam, an individual will be a registered Occupational Therapist (OTR). Most states require licensure in order to practice, however, state licenses are usually based on the results of the NBCOT certification examination.

Information Sessions

An overview of the occupational therapy program and the prerequisite requirements for admittance is presented at our information sessions. No appointment is necessary. Advisement will be provided individually as time permits so please bring a copy of your transcripts.

Occupational Therapy helps people live life to its fullest. It does this by helping people of all ages who have suffered an illness, injury or some form of debilitation relearn the skills of daily living. By focusing on the physical, psychological and social needs of its patients, OT helps people function at the highest possible level, concentrating on what's important to them to rebuild their health, independence and self-esteem.

Occupational therapists are specially trained and credentialed in the field and rely on evidence-based best practices and science-driven data to constantly improve patient outcomes. In an era where consumers want to increasingly be empowered and maximize life's potential, more and more people are recognizing the value of occupational therapy and as a result the field is expected to grow significantly over the coming years. (AOTA, 2008)

Admissions Requirements

FAR
BEYOND

Bachelor's Degree is required, with a minimum of 3.0 overall GPA.

These credits must include:

- 20 credits of natural sciences for science majors. Courses must include labs and have been completed within the last ten years:
 - 8 credits of Biology*
 - 4 credits of Chemistry
 - 4 credits of Physics
 - 4 credits of Anatomy*
- *If **Anatomy and Physiology I and II** have been taken, they will be accepted as 4 credits of BIO and 4 credits of Anatomy.*
- 6 credits of Arts and Humanities
